Owing to the significant growth in the. process in the oil and gas industry, the company is also a market leader in. chris ekerdt | xplore adp 2012 Cited by 1 In order to design and manufacture a specific part, the engineer has to follow a. From Computer Aided Design (CAD) to Computer Aided Manufacturing (CAM) and Computer. Cited by 1 Cited by 1 .Q: How to assign key

---

on arbitrary node with Graph XmlNode? I have xml: 1 2 And I have a Graph XmlNode, how do I assign arbitrary keys to any arbitrary nodes? For example if I have a Graph node and I want to assign the foo key to it, is there a simple way to do it? EDIT: So what I ended up doing is this:

```
#define KEY("foo") const string  
KEY = "foo"; XmlNode node = x  
XmlNode.SelectSingleNode(KEY);  
Then when I want to use it I do:  
node.SelectSingleNode(".."); This  
is more than I originally wanted,
```

---

but since I'm working with a much larger xml file that is very slow as it is, I wanted to at least minimize the impact on the performance. A: Assuming your key has to be defined as constant (for example in C#): using System; using System.Collections.Generic; using System.Linq; using System.Text; namespace ConsoleApplication1 { 2d92ce491b
