

.re-cap .. "We put a video on YouTube (fortguard anti-ddos firewall cracked tongue) . "It contains two-thirds of the steps that took us hours and hours to crack and figure out." "Once we found it, we rewrote it so that it's a lot more...secure." "We published it on a website. . . fortguard anti-ddos firewall cracked tongue . "The video was on YouTube for three days, and we saw a huge surge of activity as the server was being accessed." "It was an incredible amount of traffic. . . "It took a while for us to realize that something was actually happening." . . . fortguard anti-ddos firewall cracked tongue . "We're like, 'No way, this thing is being attacked,'" said Dranetz. . . The downside is that it doesn't just work with VPSs, it works with any type of server. . . They found that they could get around the firewall by using a database mirroring proxy. "We had to use a database mirroring proxy to get into the box," said Dranetz. . The firewall was expecting a typical traffic pattern and would bar it out of the box. . . fortguard anti-ddos firewall cracked tongue . "We found out that by the time the firewall responds and blocks the connection, the connection's already done and the application has already been compromised," said Dranetz. . . The team figured that if they could mirror a common web server or web service, it would not be blocked. . "We set up a separate proxy server that mirrored a website that we wanted to get access to," said Dranetz. . . fortguard anti-ddos firewall cracked tongue . . The team was able to pull it off. . The second we started, we were getting thousands of hits every second. . "It's much better to talk about exploits in depth in a technical blog post, as opposed
