Athmari says 3 months ago. Commenting here for the first time. Look forward to speaking to you again in the future. Commenting here for the first time. Look forward to speaking to you again in the future. Then what are you waiting for? So far, I have created a new PS3 Slim with 8GB and a blue hard drive. I am currently trying to download and play this movie. A: Yes, you can use a Mac, but for the best results, get a copy of Boot Camp and follow the instructions for using a Windows environment on a Mac. On OS X El Capitan (10.11), boot camp is called "Windows" and is under "More Info". Q: Get the position of all chars in a string I'm trying to write a function that will return the position of all the chars in a string but I'm having a bit of difficulty to figure out how to do it. Example: Input: hello world Output: 4,7,10,13,18,20,23,25 Thanks A: It looks like you just need to implement a counting function for your problem. Basically, you need to remember that your input is always a string, and you want to loop over the entire string. Therefore, a counting function is the way to go. A: Don't use a list - consider a map. As an example, for a map[int]int: package main import "fmt" func main() { var f map[int]int f = make(map[int]int) f[1] = 0 f[2] = 0 f[3] = 0 f[4] = 0 f[5] = 0 for i, v := range []int{1,2,3,4,5} { f[v] = f[v] + 1 } fmt.Println(f) } A: var (chars map[rune]int) func runesToInts(str string) int 2d92ce491b
