And even create your own YouTube channel. Mello has a wide range of services for website. This includes design, content and web development services. You can build a website, convert it to responsive and convert it to mobile app. Today we are going to visit the website of an organization called Praktik. It is India's first workspace

---

dedicated to women. It offers women freelancers a one stop solution for all their needs. Today we're visiting the website of an organization called Praktik. It is India's first workspace dedicated to women. It offers women freelancers a one stop solution for all their needs. Heat sensitive recording material generally comprises a support having

---

provided thereon a heat sensitive coloring layer containing a leuco dye, an electron donating color forming compound (hereinafter, coloring reaction initiator) and an electron acceptor. Color formation upon heating with the above-described heat sensitive coloring layer is brought about by reaction between an electron donating compound which can be

---

reduced and an electron acceptor which is oxidized, whereby the heat sensitive recording material is colored. Thus, a pattern of the colored image can be read by the heat generated when a part of the heat sensitive coloring layer is irradiated with a light beam such as a laser beam. The heat sensitive recording material has a number of advantages over other

---

recording material, for example, it is of a simple structure and easy to produce and has a high recording density, coloration is instantaneous and the production of noise is small. Therefore, it is extensively used in various applications. Conventionally, the above-described electron donating compound is a phenol compound, an aniline compound, a

---

diphenylmethane compound or a benzoin compound. A variety of kinds of electron acceptors have been proposed, for example, phenol derivatives, aldehydes, ketones, alkoxyphenols, heterocyclic compounds and organic or inorganic metal salts, inclusive of metal oxides. There is known a heat sensitive recording material comprising a support and

---

a heat sensitive coloring layer containing a leuco dye, an electron donating compound and an electron acceptor. The heat sensitive recording material is required to have high sensitivity and excellent coloring durability. As the electron acceptor, there is known, for example, a metal salt such as a salt of a bivalent metal, inclusive of iron, copper, cobalt,

---

nickel, zinc, magnesium,  
aluminum
