
Automation Studio P6 13

DOWNLOAD: <https://byltly.com/2ilriy>

: 10 hours. Students will learn the concepts, definitions and theory of hydraulics for Automation Studio. This course provides

an introduction to working with the category of hydraulics including how to configure basic hydraulics through the use of the tool bar and the fluid configuration dialogs. This course also provides an introduction to using the broad variety of modules in Automation Studio which is a software package that allows you to define and simulate a system from a single point, rather than build it from parts. This module includes: Introduction to Automation Studio Basic hydraulic Configuring the tool bar for a hydraulic system. You will also learn about and create a few valve models and configure the model view. Introduction to the Simulation Tool Dialog Boxes- How to configure and modify the model view. Setting up Parameters Introduction to the Simulation Tool Module 2 Using Control Fluid Toolbar Basics- Using basic functions of the toolbar for basic hydraulic components such as faucets, valves and pumps. Making basic fluid connections. Basic Functions of the Toolbar- How to use the basic functions to control the hydraulic fluid in the system. Using Control Fluid dialog. Working with Control Fluid Model View. Introduction to Control Fluid dialogs Making basic fluid connections- Making basic fluid connections. Learning to use the Fluid Control dialog box About the Author: Dr. Anthony Palazzo is a Professor of Mechanical Engineering at San Diego State University.
