Interface elements The user interface includes the ribbon, interface elements (icon, menu item, tool bar button, status bar, etc.), edit panels, attribute fields, and toolbars. A wide variety of icons, and methods, within AutoCAD, and their associated control methods, can be used to present and manipulate information and the functionality within AutoCAD. AutoCAD and its user interface is designed to support a large number of system fonts and support screen font sizes to improve readability of text and access to controls and menus. The user interface consists of a number of elements: A number of toolbars are available for launching, closing, and managing dialog boxes, running macros, and running AutoCAD, from which an operator may select commands, toolbars, groups of icons, menus, and settings. A number of tabbed dialog boxes are available for operators to perform different types of tasks and editing such as drawing, printing, editing, or documentation. Menus are generally placed on the top part of the screen, though they may also be placed on the screen's edge. The Ribbon is a new interface for AutoCAD in 2011. It is used to make the editing tasks easier and is an extension of the toolbars. The ribbon is also used to perform many types of editing within the program. The status bar is a window on the top of the screen which displays information and status of the program. ObjectARX, a C++ class library for third-party add-ons, provides a number of methods for creating custom objects and menu items. A graphic user interface, also known as GUI or Graphic User Interface (GUI), is a software design paradigm for providing a visual environment for both interacting with and controlling computers, using a graphical interface. AutoCAD is a graphics-based program. The user interface is designed using images in a number of fonts to increase readability. The images can be downloaded from the internet or the user can design their own images. The number of objects and images within the user interface make AutoCAD useable, when compared with text-only interfaces such as Microsoft Windows. The interface consists of: The screen; A number of toolbars; A number of commands and shortcut keys. The design of the user interface of AutoCAD is a great example of how successful the user interface design can be if the user interface is developed with the users in mind, rather than the developers.
