Our group is playing Warhammer 40k and I have been considering putting my Warlord's Chosen into my army as a sort of melee tank, but I was wondering if I could pick one up in a group and move it somewhere else. I know that I can't move a vehicle, but I can't find anything about a full-cost unit like this. A: I believe you're looking for a unit with the Chaos Lord's blessing. Any of the Chaos Warriors or Chaos Knights have this, and since the Chaos Lord himself is basically the only unit who can move, I'm going to guess that you've got this covered. The only reason I can think to keep a Chaos Chosen is if you're going to use it in the same sort of way as a Chaos Lord's Chosen, but I don't think there's any text that justifies this. If you want to move it, you can take one of your Chaos Knights and a couple of cheap Chaos Warriors with you, like these: And move them around with other Knights or Chaos Warriors. a1d647c40b

Q: Should my package be providing a default configuration? I have a package with a single interface, and two implementations, one of which is the default. It has not had any activity on the package, but the maintainer has a much older package in the same repo which does seem to have activity. However, my current package looks a little odd, and I was wondering what the best approach is to clean up. Should I just take my current package and include its default configuration, and have the other one include a default configuration of its own? Or is there a better approach to this? A: If you are the only package author who maintains this package then it would be more appropriate to pull the default package and include it as a dependency, and only have the specific package maintain an empty default configuration. A quick Google search will turn up plenty of articles that describe why maintaining a default configuration of a module is a bad idea. Your best bet is to use the existing package as a starting point and make your own. Effect of cooking on the composition and nutrient content of three common bean cultivars grown in tropical Africa.
