digital audio file (hereinafter,
simply referred to as a file)

contains a sound of a clear

quality. Thus, a sound recorded

in a recording medium such as a

compact disk (CD) has a high

degree of quality. Also, with a digital audio player having a decoding function, a sound is reproduced at a high quality. Therefore, in a case where a sound is recorded in a file format such as WAV format in a high-quality sound recording medium such as a CD, the sound is reproduced from the recording medium at a high quality. However, as the

recording capacity increases, a large number of sounds are recorded in a single file. In such a file, a large number of sounds are frequently recorded in a continuous audio section. This causes a problem that it is difficult to reproduce the sounds with a high quality. When a sound in the continuous audio section is extracted, a time-consuming process is needed for

separating the sound. This
