Jahia SDK [Updated]

- Jahia SDK is an Eclipse-based toolkit for developers, it contains all the needed parts to build a solid WCM: Database, Module Repository, Administration, JavaScript Libraries and a lot of other stuff. - The Jahia SDK is the toolkit to develop Jahia applications: We provide the framework and a set of code generators to code your application without programming: A very useful time saver. - The Jahia SDK is an Eclipse RCP application : Jahia SDK is well-tested and fully deployable on most of the major operating systems. - We support both Eclipse 4.3 and Eclipse 4.4 with the same setup. - We provide two JSFuckinME2 modules (1.1.1, 1.2.1) which we distribute in the Eclipse Marketplace. - We provide the stand alone application - We provide a set of JSFuckinME2 JSFuckin modules to help you build your application. These modules allows you to : + generate a JSFuckinME2 JSFuckin module + generate your JSFuckinME2 XML config + create/read/update a collection + create/read/update a content type + generate your own JSFuckinME2 controller/service + register/deregister a JSFuckinME2 module in the JSFuckinME2 JSFuckin module + generate your own JSFuckinME2 workflow + generate your own JSFuckinME2 jar file + generate your own JSFuckinME2 jar file + generate your own JSFuckinME2 folder +... The official Apache Seam framework is a Java framework to create rich applications on Java EE. Apache Seam is a component-based framework where components combine to build applications. Apache Seam is used to create applications such as an e-commerce application. We have a published an Apache Seam implementation, this enables you to use the framework in your project. You can install the framework using Maven, make your way through the Getting Started tutorial of the framework to create a simple application. You can also download the framework sources and the example projects. THE MERGE OPEN SOURCE PROJECT JAVA FLOW RESOURCES (Java 4, 5) ===== The code presented in this project is based on open source framework Apache Commons Collections (or at version 4.

What's New In Jahia SDK?

Jahia SDK is a complete set of class definitions for all aspects of Jahia module development. These classes are open source and of free distribution under the LGPL license. The SDK is composed of packages: * Jahia.core contains the class definitions for simple services such as data access, templating and URL routing; * Jahia.admin contains the class definitions for the admin area; * Jahia.api contains the class definitions for the web service APIs; * Jahia.formatter contains the class definitions for the Formatter objects; * Jahia.service contains the class definitions for the datamodel, persistence, cache and memcached objects. In addition, the SDK also contains the Jahi and W3C XSD (XML Schema) files. Jahia.services.*.* packages Jahia.admin.*.* packages Jahia.api.*.* packages Jahia.formatter.*.* packages Jahia.core.*.* packages Jahia and W3C XSDs Jahia Services Package This package contains all the services available in Jahi, that is, the REST API, the Site Templates and a JhiAdmin admin module. Jahia.admin.siteTemplateJahiaService A service to generate a site template based on the information passed in parameters. Jahia.admin.siteTemplateJahiaServiceImpl A Service to generate a site template based on the information passed in parameters. Jahia.admin.siteTemplateJahiaServiceAsync A service to generate a site template based on the information passed in parameters. Jahia.admin.siteTemplateJahiaServiceImplAsync A service to generate a site template based on the information passed in parameters. Jahia.api.restJahiaService A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceImpl A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceAsync A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceImplAsync A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceAsync A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceImplAsync A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceAsync A service to provide a simple REST implementation of Jhi REST services. Jahia.api.restJahiaServiceImpl A service to provide

System Requirements For Jahia SDK:

Minimum: OS: Windows 7 Processor: Intel i3 2.4 GHz (or AMD equivalent) or higher Intel i3 2.4 GHz (or AMD equivalent) or higher Memory: 4 GB RAM Graphics: Intel HD 4000 or equivalent Sound: DirectX 9.0c compatible Internet Explorer: Version 10 Xbox 360 Controller Additional Notes: You must have a Windows OS and Internet Explorer 10. You can't use Internet Explorer 9 or lower. You must
