number of files in each of the compressed and uncompressed formats. When you import a file into Photoshop or Elements, you have to choose the format you want it to be saved in: Automatic – the file format is automatically chosen and saved based on the file extension. File format – the file type is specified explicitly. There are a limited number of file types supported, which are listed below. Image Viewer – the file is displayed onscreen, usually

in a window, in the most convenient way for you to view the file. Gallery – the image is displayed in a popup image viewer window. Reference or Internet – The file is stored only temporarily and is used for creating a reference or Internet file. This is an image that you can use to save and send to another user, or display over the Internet with a link. Export To export the image from Photoshop or Elements, click

Q: What is an unresolved symbol in `js_of_ocaml`? I have a problem with `js_of_ocaml` code:

```
#ocaml.ppx type t = t0 type t0 = |  
My : int -> int | G : int -> int let  
t0 = G 3 let convert f t = let f = f  
t in let s = string_of_t f in  
Printf.printf "%d " s val convert :  
f:( 'a -> 'b) -> t:t0 -> string The  
compiler tells me that f is an  
unresolved symbol. How can I  
fix it? A: Add open Eval in
```

---

at\_exit before let t0 = G 3 Then you can change convert function to let convert = fun f t -> at\_exit (fun () -> f t : \_string) You can remove at\_exit since it's no longer needed. Methanethiol is the methyl group bound to S-H sulfur. It is obtained from methane by reaction with hydrogen sulfide, typically through a catalytic reaction using rhodium. See, generally, J. Dabrowski, in: Chemical Reactions of Thiols (J. H.

---

Sutherland and S. P. Beckwith eds., Interscience Publishers, New York, 1968). Methanethiol is a compound with a strong smell, so is used as a fragrant and sweetening agent, mainly in perfumes, but also in food preparation, inks, dental materials, and cleaning products. The most common routes of production are (1) the catalytic hydrogenation of thioacetamide in a base, (2) reaction of methane with thiophene or sulfur

---

in the presence of a transition metal catalyst, and (3) partial oxidation of methanol with sulfur. The first two routes (1) and (2) are energy intensive and have low selectivity, and the third route (3) yields mixtures of different products, which makes purification of individual products difficult. Methanethiol can also be synthesized from methyl mercaptan and hydrogen in the presence of a ruthenium catalyst. The preparation of

---

methyl mercaptan has been described previously. See, for example, J. S.

Q: Bootstrap thumbnail isnt sized to the parent I am using Bootstrap 2.3.2. I have a thumbnail that I want to be sized to the parent div. title but it is sizing to the div wrapper. A: It is because you have specified span3. If you add `img class="img-`

---

responsive", it will fix the problem. Q: Program compiling with error CS1525 I'm trying to program this university course assignment in C# and VS2013 Express. Here's the code I have so far:

```
using System; namespace
ConsoleApplication1 { class
printCalendar { static void
Main(string[] args) {
Console.WriteLine("The current
year in the Gregorian calendar
(in the system clock format) is
{0}", DateTime.Now.Year); } }
```

---

} But I get an error of CS1525  
The name 'Now' does not exist in  
the current context A: The now  
is a reserved word - there is a  
static property called Now that  
you can use instead. using  
System; namespace  
ConsoleApplication1 { class  
printCalendar { static void  
Main(string[] args) {  
Console.WriteLine("The current  
year in the Gregorian calendar  
(in the system clock format) is  
{0}", DateTime.Now.Year); } }

---

} Note that `DateTime.Now` is also a reserved word and is also used in the .NET Framework for specific types. You should consider renaming one of your variables, that is, use the `DateTime` property instead. Q
