AM-Notebook Lite is an information manager that can save notes, spreadsheets, flowcharts, to-do lists, and many other documents. Complex and encompassing GUI The graphical user interface of AM-Notebook Lite takes a lot of cues from Microsoft Outlook in its layout. Although significantly simpler and with less theme colors, most of Outlook's buttons are in the same place here as well, and perform the same functions. You will be able to create new notes, spreadsheets, and new tabs to better optimize your workflow. Also, in the lower left-hand panel, you'll find calendar entries and contacts in a very similar fashion with Microsoft Outlook. Office-oriented features AM-Notebook Lite is your typical office organizer. It will help you create calendar entries, notes, and spreadsheets. All these can be later viewed and inspected in different tabs in order to multi-task your way towards finishing your project faster and more efficiently. To increase your flexibility, the application also allows great font and paragraph customization in all document formats you're working on, be they spreadsheets or notes. Many of Word's features are present besides the almost identical GUI layout. The similarities don't end when it comes to alarms. You can add them straight in your calendar depending on your meeting schedule. Comprehensive configuration settings You can tweak a lot of elements in the Preferences area. There you can work on your to-do list, calendar entries, notes, and other internal features. The settings area is easy and compact enough to synthesize every option that might be of interest to you, while not trying to be overwhelming by offering abilities you'll never need or understand. Conclusion AM-Notebook Lite is a great standalone application that manages to copy

Windows Outlook layout with success, without keeping you tied to a larger service package like Microsoft does. It offers great accessibility while keeping the general interface familiar and useful.
