Q: number without a base with EaseUS Data Recovery I have a data disk with an Ubuntu live CD on it. I read somewhere that you can use EaseUS Data recovery to write the content of

the CD back to a file on your hard drive. Is there a way to do this without relying on some sort of DD command?

A: I have never used it myself, but I have read that this can be done without

installing it by using the "burn" command in Linux. Q: Creating my own special button in Java I want to create a button that does absolutely nothing except indicate to the user that their input is being recorded. I have read this is bad practice. I have been told to either use JButtons or JRadioButtons. While I think radio buttons might do the job, using them would be difficult because the button

needs to be automatically re-checked when the user pushes the button. What would be the simplest way to do this?
A: When using a JRadioButton I would add an ActionListener to it. When it is clicked you should do nothing.

```
JRadioButton radioButton = new  
    JRadioButton("Whatever");  
radioButton.addActionListener(new  
    ActionListener() { public void  
actionPerformed(ActionEvent e) { }  
});
```

If you have a custom Button you can create your own Button subclass and add a new ActionListener to it.

```
public class CustomButton extends  
JButton { public CustomButton(String
```

```
text) { super(text); } public void  
actionPerformed(ActionEvent e) { } }
```
