dev, testing and production. After that i'm deploying the contract to all of these environments. In this case I'm using docker, when I deploy the contract to production the test environment the dev environment are also deployed because I'm using the same docker image which I'm using for the test and production environments. Is there any way to separate the containers with different tags and images? A: You can specify the environment in the command: `composer config view -c -i development -o yml` Just make sure you include the `-i` and `-o`.

**Pregnancy loss after an impacted cerclage: a case report.** An impacted cerclage after a conceptional loss is an uncommon complication. The authors report on a 34-year-old woman who suffered a cerclage placement for a fetal size diminution. The pregnancy was complicated by placental abruption, which occurred 40 days after the surgery, preterm labour and abortion, and preeclampsia. At 36 weeks, the patient delivered a preterm fetus dead in the amniotic sac, weighing 535 g. A histological analysis of the placenta revealed an extrusion of the implantation site. The authors discuss the management of cerclage complications, remarking the difficulty of defining the appropriate treatment for a pregnancy loss in patients with an implantation site in the uterine cavity.LNAPL-cont
