* If you want to work in a different editor, TURN OFF the feature that says "Enable Photoshop CS6 Experience for Photoshop." You can find this option by going to Edit > Preferences > Appearances (or go to the Photoshop CS6 _app_ file). Switch to the Creative Cloud tab. Uncheck the box called "Show Photoshop CS6 Experience in CS6." You can then continue working in Photoshop without the features that belong only to Photoshop CS6. * You can see exactly what each tool does and how it works by hovering the cursor over any tool. See the tip below for an example. * For best results, use the default settings unless you have a good reason to change them. * Use the Options bar settings (including Settings) to turn on or off the Photoshop CS6 Experience (you may see an Options bar even if you don't see it if you have the Preferences dialog open) and to switch between the floating and fixed style. (The floating option is more useful when you're dealing with layers.) * For greater accuracy and detail, press the key to activate the zoom tool. * To zoom in further, press Ctrl+scroll wheel or Shift+scroll wheel. * To zoom out, press Ctrl+– or Shift+–. If you want to zoom to a specific area of the image, click the area. * To crop or remove a specific area, click that area and drag to the area where you want to remove the image. * To find out more about deleting objects from the image and in other ways, see the "The Power of Selecting" section, later in this chapter. * See Chapter 7 for more on coloring and using transparency. * To copy or move a selection, highlight the items, right-click (Windows) or Control+click (Mac), and choose Copy or Cut or Copy or Move, respectively. * To copy or paste some text, highlight it (the cursor changes to the I-beam), press Control+C or Command+C (Mac) or Control+X or Shift+Control+X (Mac), and choose Copy or Paste (Mac) or Control+V or Command+V (Windows). * To choose the most recent file as your new file name, choose Edit > Preferences > Recent Files and turn on the box that says "Automatically save using the default file extension for the current document type."

Our purpose was to identify clinically silent carotid artery stenosis in patients undergoing carotid endarterectomy (CEA) and to examine the risk factors for stroke in these patients. Patients with documented high-grade internal carotid artery stenosis and conventional cerebral angiography findings were admitted for CEA to a single institution. Asymptomatic patients were selected for CEA if the preoperative duplex ultrasound examination was normal and if carotid endarterectomy seemed indicated. A control group of patients undergoing CEA for carotid territory disease other than stenosis was selected from a prospective database on CEA in the authors' institution. An independent neurologist blinded to the preoperative examination and to clinical outcome examined each patient postoperatively to identify those with stroke as the presenting event. Of 58 patients undergoing CEA, 21 (36%) were asymptomatic. These patients had fewer stroke risk factors and a higher stroke risk index than did control patients (preoperative maximal systolic blood pressure, $P =.049$; baseline neurologic disability, P 05a79cecff

Q: Regular expression in JS with backslash cause error I have a regular expression like var regex = /regex/"\+file\.extension"/; The above expression works fine in JS but when I replaced file.extension in the regex pattern with a backslash like this: var regex = /regex/"\+file\.extension"/; it cause SyntaxError: Unexpected token ILLEGAL As far as I know, the backslash needs to escape the next quote. What's wrong with my understanding? A: There are certain reserved characters which need to be escaped in RegExp literals. You can find this list here This should solve your problem: var regex = /regex/"\+file\.extension"/; Regex literals require special escaping for: '-' Backslash '.' Period '?' Question mark '*' Asterisk '+' Plus '|' Pipe '^' Caret '$' Dollar '\' Escape '\t' Tabs ' ' Newline '\v' Vertical Tab '\f' Form Feed '\r' Carriage Return '\0' NUL character '\xA0' NO-BREAK SPACE '\u[' Unicode '\U+' Unicode '\[' ['\]'] There's also a list in the ECMA 262 standard that lists those characters. A quote in RegExp is not a reserved character. The backslash is the only thing I can think of which requires escaping in RegExp literals. Q: I am trying to get this regex to capture everything except a specified word I have this sample text: $string="I have 2 comments for this article [Sidebar Sidebar], some more text, and finally some more text; [Sidebar Sidebar] I have 2 comments for this article [Sidebar Sidebar], some more text, and finally some more text; [Sidebar Sidebar] I have 2
