SCUFFHAM AMPS “ THE FINE REFINING OF THE DRUM!!!#9/22/2014” .New research by The University of Kent looks at the cultural influences on the English language. It has been conducted over a decade and the findings have now been published. At a time when formal education becomes more sophisticated and a society becomes increasingly multi-cultural, it is important to understand how the culture of today develops in ways that impact on our modern culture. The research is called 'Culture, Language and the Making of English' and it focuses on the language at the turn of the 21st Century. A multi-disciplinary team of researchers, including historical linguists, etymologists, lexicographers, sociolinguists and communication scholars, have been assessing how the English language has changed over the last five hundred years. The research shows that the development of English has been based to a considerable extent on the background assumptions of the society. For example, the English language developed to suit the needs of the English elite, not those of the masses. Language in the 19th and early 20th centuries was aimed at the upper classes, for example, in politics and economics, medicine and science. The study therefore highlights how English has been influenced by society's location, ideology and political events. Explore further 'English' is about rights, not class, researcher says
More information: 'Culture, Language and the Making of English', by A.S. Bowness et al., International Journal of English Studies, 23 July 2016[Silent mucosal pneumatosis associated with distal ileum carcinoma in ulcerative colitis with perforation]. A 51-year-old man with ulcerative colitis was presented with fever and severe diarrhea. He was diagnosed with fulminant ulcerative colitis with perforation of the ileum. The patient underwent ileostomy and sigmoidectomy with total colectomy. Six months after the surgery, he developed septic shock and acute respiratory distress syndrome. He died of septic shock 27 days after the ileostomy and sigmoidectomy. At autopsy, multiple perforations were seen in the distal ileum in addition to large pneumatosis in the submucosa of the colon. This necrosis was seen only in the superficial area of the ileum, and
