1. ****Find Your Way to Photoshop**** To get to Photoshop, click the Adobe Photoshop application icon in the Dock to start the application. If Photoshop is not already on the Dock, click the icon in the Finder (Windows) or the Applications folder (Mac OS X), and click the Photoshop application in the resulting window. Photoshop is a bit like Windows Explorer, so you can simply double-click the Photoshop icon in the Dock or Finder to start Photoshop. When you double-click Photoshop, a box appears to remind you of any existing Photoshop open documents, so be sure to close them before starting again. If the box is not there, Photoshop will open in the default editing window.
2. ****Choose Your Photoshop Settings**** The main Photoshop window you see in Figure 1-1, Photoshop

opens with a single image and a strip of eight color swatches below the image. In addition, a menu bar is at the top of the window. The menu choices vary depending on what you're doing. For example, the Tools options bar is active when you're making changes to the image, but it disappears when the main Photoshop window is a document with multiple layers. If you've ever worked on a computer, you probably already know the image controls.

These apply to the `_current_` image in the Photoshop document. Your choices include these:

- * `_View_` or `_photo:_` Selects whether the Photoshop window shows an image with a large size or the reduced-size image.
- * `_Grid_` : Enables a grid that helps you work more easily when you're composing or editing the image.
- * `_Draw_` : Enables tools that let you draw lines, arrows, circles, and so on, so you can define parts of the image, retouch existing parts, or use arrows to move the original image or new portions into position.
- * `_Layers_` : Lets you see and work on the images that make up the image. A `_layer_` is a single image in the project document or on the hard drive.
- * `_Adjustment Layers_` : Enables adjustment layers, which are important when you're using the Photo Filter feature. An adjustment layer is another image in a layer, but it's embedded in the original image, and the layer appears

with a different color. Adjustment layers can also be accessed via the Adjustments panels in the Layers panel

New Delhi, India - Ahmed is 25-year-old assistant TV journalist who lives on the streets and is tasked with being a liaison between a TV crew and youth in a slum in New Delhi. He has done this job for the past two years, and is able to speak to people from the outskirts of the capital who live on the streets. But when he was invited to speak to BBC Newsnight, the camera crew struggled to understand him at first. "I talk with the camera person because I don't know English so he talks to me in Hindi and I pretend I understand," he says. BBC Newsnight (@BBCNewsnight) In India, Ahmed tells @jon_kerry how being a journalist on the streets has changed his life. pic.twitter.com/xxOwTUfFv5 A picture taken by the BBC Newsnight crew in Ahmed's home shows him sitting beside the camera. Meanwhile, Ahmed says the camera crew, and the people who agreed to be interviewed, treated him as "a star". "They tell me to drink their chai and eat their food. Some of them offered me money to drink their chai and eat their food, and to take my pictures," he says. "But I'm not a star. I'm just a street kid, who used to live on the streets until I became a journalist." "I live on the

streets because they have given me no other choice,” says Ahmed. “I am studying journalism on the streets and I’m providing a service for the society. I make sure that people from the slums speak out and don’t hide their problems.” Ahmed's father - who has worked for a government body for the past 15 years - is against his son's career choice because he believes he will not be able to make enough money. "He is just a street boy. He can't be a journalist. He can never make money for his family," Ahmed's father says. "A journalist has to be rich. Many of us can't take care of ourselves; we only eat biscuits. That's not the life we want for our children." Ahmed's mother used to work as a cook, but he says she retired due to her age. Ahmed says his family lives on a salary of around 300 rupees (£3)

Systemic therapy for prostate cancer metastatic to bone. Prostate cancer is the second most common cause of death from cancer in men. Metastatic disease is the cause of death in approximately half of patients with localized prostate cancer, and although metastases in the bone rarely cause symptomatic disease, they are associated with significant morbidity. Advances in the treatment of

metastatic disease have occurred in the last decade and may be of significant benefit to men with metastatic prostate cancer who have hormone-refractory disease. Radiotherapy is the mainstay of treatment for patients with bony metastases. Chemotherapy is most commonly used for men who have metastases that do not respond to androgen ablation therapy. Bisphosphonates are useful in maintaining bone quality and preventing fractures in men with metastatic disease, and their use has become more common with the availability of aminobisphosphonates. Chemotherapy has a limited role in the treatment of men with metastatic disease. The recent availability of new, active agents for the treatment of metastatic disease offers new hope for men with this disease. 754 N.W.2d 286 (2008) PEOPLE of the State of Michigan, Plaintiff-Appellee, v. Brian Russell BOGGS, Defendant-Appellant. Docket No. 136354. COA No. 278004. Supreme Court of Michigan. September 9, 2008. On order of the Court, the application for leave to appeal the December 17, 2007 order of the Court of Appeals is considered, and it is DENIED, because we are not persuaded that the question presented should be reviewed by this Court. Q: Unbounded set has a supremum I'm looking for a way to prove that if \mathbb{S} is unbounded, $\sup(\mathbb{S})$ exists. My first

thought was to use a ϵ - n argument, but it seems to me that I would have to enumerate \mathbb{S} and try to find an element that is bigger than all the enumerated elements. But, if the element existed, I could use it, otherwise I would take the max of the element found and its predecessor element (by the enumeration), no? So, it seems like that would be not rigorous. Any help would be appreciated. A: If you enumerate \mathbb{S} , you can simply choose
