With the release of the 2018 version, the program has also received an overhaul. Below you can find a list of changes and their consequences. Adobe Photoshop Elements 2018 for Mac & Windows Users: Update: Adobe Photoshop Elements 2018 has released. You can find the release notes here. Changes Made in Adobe Photoshop Elements 2018 The changes made in the first version of Photoshop Elements are summarized below: The UI and user experience have been revised The Canon Photo Album and RAW Organizer have been removed Full image editing in the program has become slower. You can reduce this by turning off all the features you don't use Adobe Camera Raw has undergone a significant redesign Support for Windows 10 has been improved The most prominent change made in the 2018 version of the program is a brand-new, simpler and faster user interface. We did have a look at the Photoshop Elements 2018 release a few weeks ago. The program is getting a makeover: not in terms of its photo editing features, but in its user interface. Adobe Photoshop Elements has its first major UI (user interface) update in over a decade. The interface has been completely redesigned to make it faster, easier to use, and more intuitive to navigate. Buttons and controls have been made larger to make it easier to click and tap. In addition to that, a search bar and new, compact window views have been added. Here is a quick tutorial on how to use the new Photoshop Elements 2018 interface. Add & Remove Image Effects Previously known as "Adjustment Layers," the UI for this feature has been completely redesigned to accommodate the new, simpler UI. New to the UI is the addition of the "Add Effect" and "Remove Effect" tool buttons. This allows you to add or remove effects without starting or saving the image. Whenever you add a new image effect, Elements compresses the image. This means that the image will take longer to open up again than before. The new interface has been redesigned to accommodate this. In the Layers panel, you can still use the Adjustment Layers as usual. However, using the new interface, you'll need to click "Add Effect" to add a new effect. Alternatively, you can type "layer effect" into the search bar. And you can remove an effect by clicking 05a79cecff
